

LESLIE AMADI

Lead/Senior Technical Writer · Documentation Governance · Knowledge Management · Process & Operations

Hamburg, Germany · angelalora16@gmail.com · +49 151 57618141 · [LinkedIn](#) · [Portfolio](#)

PROFESSIONAL SUMMARY

Senior Technical Writer with 5+ years of experience owning documentation programs across engineering, product, finance, operations, compliance, and customer-facing teams. I transform complex information into structured, governed, and maintainable documentation systems, knowledge management practices, and end-to-end process documentation that scale alongside organisational growth

Most recently I served as the primary owner of documentation standards and governance for an environment of 400+ knowledge assets, defining the review processes, ownership models, and content standards that other teams follow. I pair that governance depth with hands-on technical range. My portfolio is proof that I can hold documentation to a valuable standard even in demanding technical domains.

CORE COMPETENCIES

Documentation Governance | Standards Knowledge Management | Information Architecture |
Business Process Documentation | Incident & Service Operations | Confluence Administration &
Jira Workflow Management | Process Mapping & Swimlanes | Stakeholder Engagement | MLOps &
API | Documentation Compliance & Audit | Onboarding Process | Support Continuous
Improvement

PROFESSIONAL EXPERIENCE

Senior Technical Writer / Process & Operations Specialist Oct 2022 – Jun 2026 *GC Software Development GmbH · Hamburg, Germany*

Documentation Leadership & Governance

- Owned documentation standards, governance, and knowledge-management practice across Product, Engineering, Finance, Operations, Compliance, Incident Management, and Customer Support the single point of accountability for how the organisation documents itself.
- Governed an environment of 400+ knowledge assets (SOPs, process docs, workflow guides, templates), introducing ownership models and review cycles that cut duplicate and stale content and made the right document findable.
- Ran documentation audits and gap analyses that surfaced undocumented, business-critical processes and ownership ambiguities, then drove the remediation turning documentation from a backlog into a managed asset.
- Established content standards and templates that other teams adopted as the default, creating uniformity in architectural information flow, reducing onboarding friction and reviewing back-and-forth across departments.

Process Documentation & Operational Excellence

- Documented 30–50 end-to-end business processes and 100+ supporting subprocesses, billing escalations, incident lifecycles, reconciliation, approvals, and operational handoffs that became the primary reference for business-critical work.
- Produced process maps, swimlane diagrams, decision trees, and workflow models that replaced tribal knowledge with a shared, auditable source of truth.
- Built onboarding documentation and knowledge packs that accelerated new-hire ramp-up and reduced

dependency on informal, person-to-person knowledge transfer.

Incident Management & Service Operations

- Created and maintained incident response procedures, escalation workflows, and operational playbooks used by support and service-management teams during live incidents.
- Documented decision paths, escalation criteria, and stakeholder responsibilities, and kept Jira workflow and change-management records current so operational changes were reflected in documentation before deployment.

Finance & Compliance Documentation

- Partnered with Finance to document billing operations, reconciliation, and exception-handling procedures, and worked with compliance teams to align documentation with internal controls and audit expectations.

Technical Writer Jan 2021 – Sep 2022 Betinvest • Remote

- Produced technical documentation, release notes, and user-facing content for software products and internal systems, working directly with engineers, QA, and product managers to capture system behaviour.
- Maintained knowledge repositories and documentation libraries, improving content organisation and discoverability, and supported release cycles through coordinated documentation planning.
- Contributed to knowledge-management initiatives that improved information sharing between technical and non-technical teams.

SELECTED PORTFOLIO WORK

Full case studies at lesliewrites.tech/portfolio.

- Helios Model Serving (MLOps): full platform documentation architecture, autoscaling, SLOs with error budgets, incident runbooks, RACI, and a companion DR & capacity playbook.
- NeuralFlow Evaluation Suite: an ML model-evaluation methodology, offline metrics, slice & fairness analysis, calibration, drift, and a regression gate that catches what a single accuracy number hides.
- FinSight Risk API: end-to-end API reference and integration guide for a real-time financial risk service error catalogue, idempotency, SLAs, and security & compliance guidance.
- Incident Response & Jira Workflow documentation: post-incident analysis, RACI, and governed ticket-movement workflows for multi-department operations.

(This are made up scenarios in alignment with my experience I am not to share my company work)

TOOLS & TECHNICAL SKILLS

Documentation & Knowledge Management: Atlassian Confluence, Knowledge Base platforms, information architecture, content governance, Docusaurus.

Process & Workflow: Atlassian Jira, Draw.io, process mapping & swimlane tools, decision trees.

Technical domains: MLOps & model serving, API documentation, incident response, billing & finance operations.

Productivity: Microsoft Office Suite, Google Workspace, Markdown, HTML/CSS for documentation sites.
